DETAILED ACTION

Response to BPAI Decision

In the decision by the Board of Patent Appeals and Interferences (BPAI) mailed 7/24/07, the rejections of claims 1-33 and 35-37 were reversed. The following action is a response to the decision rendered by the Board of Patent Appeals and Interferences (BPAI) mailed 7/24/07. Claims 1-33 and 35-37 are pending in the application and are allowed.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Patrick Yoder on 11/19/07.

The application has been amended as follows:

Claim 1, line 9, after "data" add "and a predefined report template".

Claim 23, line 12, after "data" add "the report template".

Claim 29, line 9, after "data" add "and a predefined report template".

Claim 35, line 9, after "data" add "and a predefined report template".

Allowable Subject Matter

Claims 1-33 and 35-37 are allowed. The following is an examiner's statement of reasons for allowance:

Claim 1:

The Board of Patent Appeals and Interferences has interpreted the Examiner reliance on the teachings of Montagna et al. and Wong et al. as directed to generating reports for management of a medical facility related data, but find that neither reference teaches or fairly suggests the claimed “generating the report in the second processing space based upon the transmitted data and a predefined report template”.

The closest prior art of record (Montagna et al. and Wong et al.) does not teach or fairly suggest generating the report in the second processing space based upon the transmitted data and a predefined report template. More specifically, the prior art does not specifically teach or suggest transmitting data from a first processing space to a second processing space by a security device and manipulating the data once in the second processing space to generate a report according to a report template.

Because the prior art does not teach or disclose the above features in the specific manner and combinations recited in independent claims 12, 19, 23, 29, 35, 36 and 37, and as further interpreted by the Board of Patent Appeals and Interferences, claims 12, 19, 23, 29, 35, 36 and 37, are hereby deemed to be allowable.

Originally numbered dependent claims incorporate the allowable features of originally numbered independent claims 12, 19, 23, 29, 35, 36 and 37, through dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

In related art (6,272,469) Koritzinsky et al. teaches a medical and diagnostic and imaging systems which is configured to execute protocols for examinations and image acquisitions

In related art ("Surgical templates for orthopedic operative reports") DeOrio discusses the use of template to shorten the process of generating reports after a surgical procedure.

The prior art made of record and not relied upon is considered pertinent to Applicant's disclosure as background material and is not of particular significance. These prior art patents fail to teach or fairly suggest transmitting data from a first processing space to a second processing space by a security device and manipulating the data once in the second processing space to generate a report according to a report template.
